Repayment risk overview

Training set · Taiwan · April–September 2005 repayment history

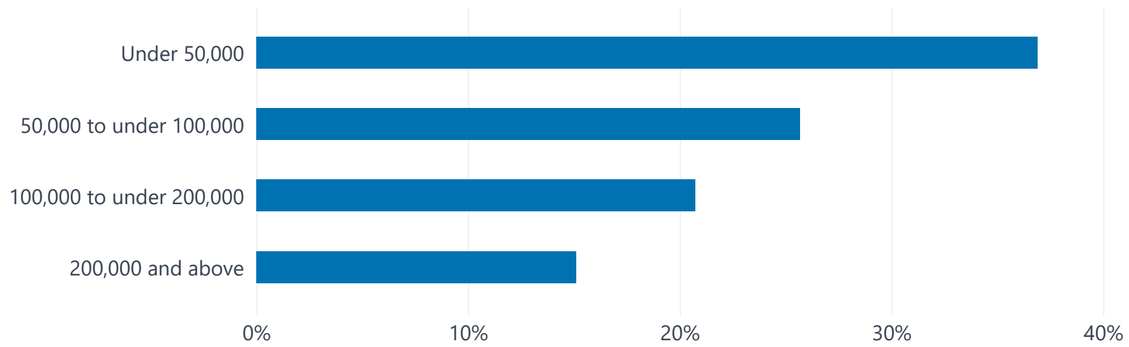

Next-month default rate by months with a documented delay

Next-month default rate by September repayment status

Next-month default rate by credit-limit band (NT$)

Training Clients

18000

Training Defaults

3982

Training Default Rate

22.12%

Held-out model evaluation

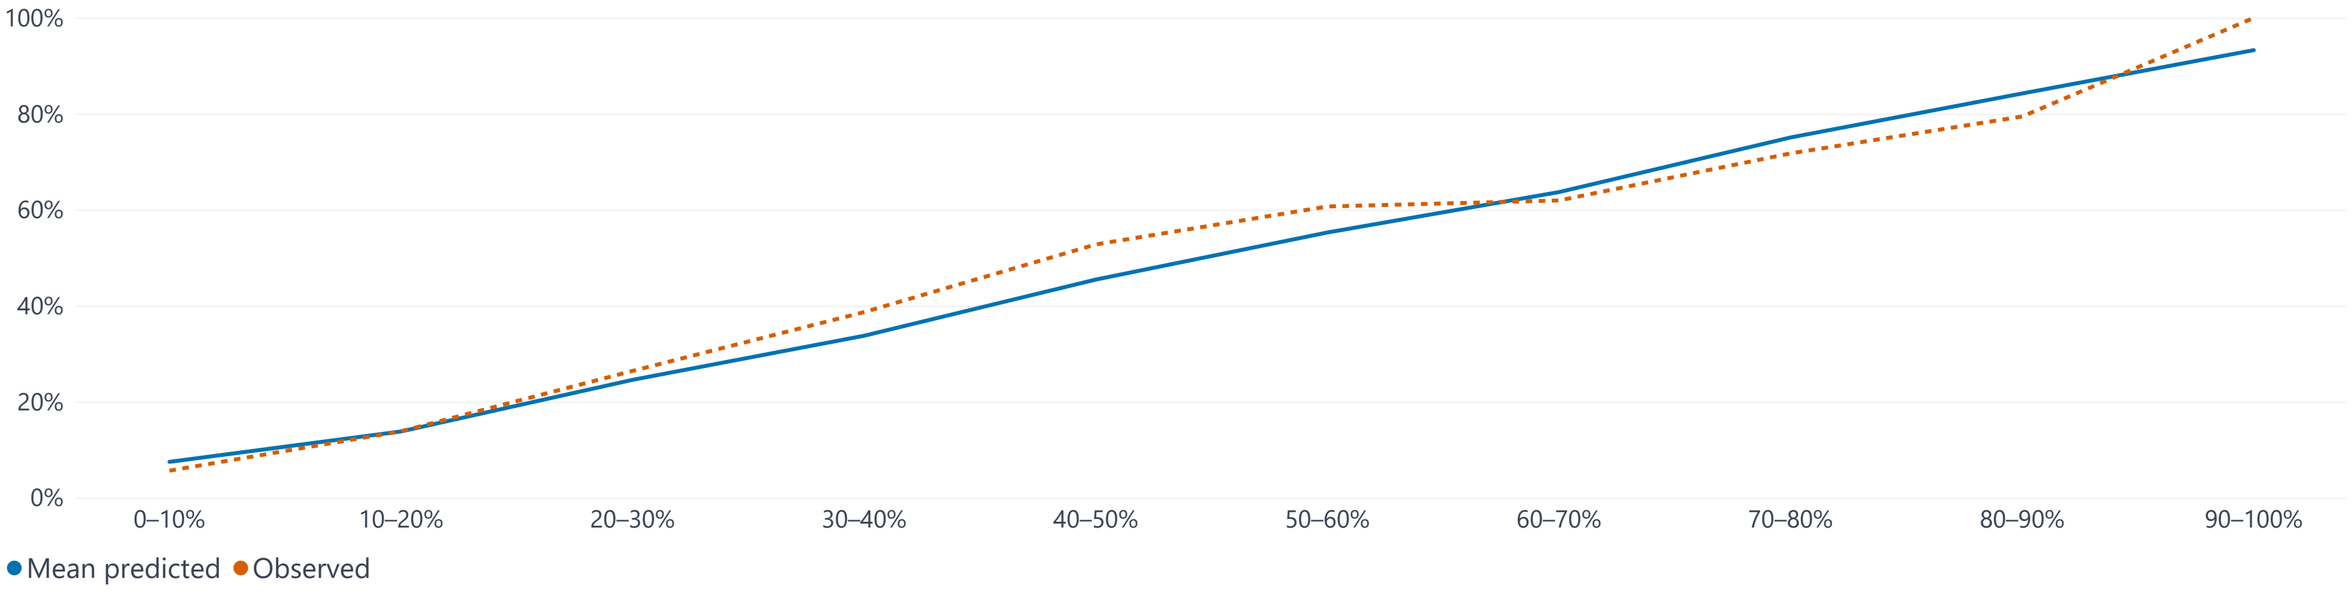

18,000 training · 6,000 validation · 6,000 test clients
Test set: 1,327 defaults (22.12%) · Taiwan, 2005

model	ROC AUC	Average precision	Brier score	Log loss
Baseline	0.5000	0.2212	0.1723	0.5284
Logistic regression	0.7719	0.5527	0.1354	0.4350

Defaults captured at two review capacities

Share reviewed	Clients reviewed	Defaults captured	Non-defaults reviewed	Capture rate	Lift
10.00%	600	415	185	31.27%	3.13
20.00%	1200	673	527	50.72%	2.54

Predicted vs. observed default rates

The 90–100% band contains just 2 clients. The test set comes from the same 2005 cohort as the training set, so performance in later periods is unverified.
